

TECHNOLOGY SUPPORTS FOR ACADEMICS

Child & Family Development Educational Specialists determine a student's learning style and differences, then find ways to support school success. Tutoring can address areas such as reading (dyslexia), mathematics (dyscalculia), written expression (dysgraphia) and related auditory, visual and nonverbal processing difficulties or disorders. Executive functioning and organizational skills are also needed for optimal learning and performance.

Often, computer programs and applications are part of a customized treatment plan. Our approaches may include:

- Audible®, Learning Ally™ and other audiobook reading applications
- Books
- Computer/tablet features and tools
- Dragon Naturally Speaking®
- Keyboarding Without Tears from Learning Without Tears®
- Smartphone features and tools
- Wi-fi Usage
- Program "Mind, Body, Backpack": strengthen executive functioning skills and apply approaches in a meaningful way.
- Program "Techie-Wanna-Be": instruction on appropriate applications and programs that support learning.

Cost

Individual sessions are offered at \$65 per hour. These sessions are not billable to insurance and are non-refundable.

Small groups may also be formed, based on interest and shared treatment goals.
